NICE Named PSIM Global Market Leader by IMS Research

IMS Research report reveals NICE Situator is by far the dominant 2010 PSIM software solution worldwide, as well as in the Americas and Asia

Ra'anana, Israel, January 04, 2011 - NICE Systems Ltd. (NASDAQ: NICE), the worldwide leader of intent-based solutions that extract insight to impact business performance, reduce financial risk and ensure safety and security, today announced that it has been named the 2010 global PSIM (Physical Security Information Management) software solutions market leader by IMS Research (www.imsresearch.com), a leading independent supplier of market research and consultancy services for the security industry.

NICE was also the top ranked 2010 PSIM software provider by a wide margin for both the Americas and Asia. IMS Research attributed NICE's success in Asia to the Company's "expansion in the region and significant project wins in India."

The aforementioned results were released in IMS Research's report "*The World Market for Physical Security Information Management (PSIM) Software – 2010 Edition*." The report provides an up-to-date and comprehensive assessment of the global PSIM market, including suppliers, growth forecasts and trends.

"NICE's PSIM solution emerged as a clear market leader in our research from a market share standpoint," said IMS Research Senior Analyst Gary Wong, the author of the report. Wong's research further revealed a number of market factors which are expected to accelerate the growth in PSIM software solutions. "Today's omnipresent threat of terrorism has heightened security concerns, leading to increased government spending on electronic physical security equipment, particularly in the transportation sector," he said. "Furthermore, innovative end-users are increasingly seeking better ways of managing security sites and facilities with large deployments of security equipment." Wong further stated that increasing regulatory pressures in certain vertical markets, and the need to comply with regulations such as the Homeland Security Presidential Directive (HSPD-12), The Transportation Worker Identification Credential (TWIC), The Chemical Facilities Anti-Terrorism Standards (CFATS), and the North American Electric Reliability Corporation (NERC) CIP standards are all fueling growth in PSIM solutions.

"We're pleased to be acknowledged as the global PSIM market leader by IMS Research," said Israel Livnat, President, NICE Security Group. "This validates what we're seeing in the marketplace and the feedback we've received from customers, who choose NICE Situator because it is by far the most open, field-proven, feature rich situation management solution available today, and has the most extensive library of gateways." Livnat added: "Choosing the right PSIM provider is an investment in the future and our customers also appreciate the fact that NICE is a financially stable company, with the resources to support their current and long-term PSIM needs."

NICE's PSIM solution, NICE Situator, addresses the security operations needs of airports, public transport, seaports, critical infrastructure, city centers and corporate facilities, by enabling automatic situation planning, response and analysis in real-time to improve situational awareness and incident handling. It does this by integrating a wide array of sensors and security systems into a common operating picture, analyzing and correlating this information, and then applying standard operating procedures and automated response plans. Designed to promote an interoperable and open security ecosystem, NICE Situator is vendor agnostic, enabling security operations to leverage best of breed technologies that meet their specific needs. NICE Situator provides more than 170 gateways to different security and safety systems, including intrusion sensors, communication devices, web feeds, and databases, as well as access control, fire and safety, geo-location, building management and video surveillance systems.

The NICE Security Offering addresses the needs of governments and enterprises with intent-based solutions for fighting crime and terror, by anticipating, managing and mitigating safety, security and operational risks. The offering enables capturing, analysis and correlation of data from multiple sensors and systems, including audio, video, radio, geo-location and web, providing a framework for fusing data silos into a single, holistic operational view. NICE Security solutions empower organizations to act effectively in real time to prevent, manage and investigate incidents, ensuring fast resolution and debriefing, and continuous security improvements. NICE Security solutions are deployed worldwide in transportation systems, critical infrastructures, city centers and enterprise campuses.

About IMS Research

IMS Research is a leading independent supplier of market research and consultancy to the global electronics industry. With over 100 analysts worldwide, spread across offices in Europe, North America and Asia IMS works with clients in over 50 countries. The company is supported by headquarters in Wellingborough, UK and offices in Austin, Texas; Shanghai, China; Seoul, South Korea and Taipei, Taiwan. IMS Research regularly publishes detailed research on video surveillance markets, among others. www.imsresearch.com

NICE Actimize Selected by Green Dot to Provide Enterprise-wide Risk Management and Compliance Solutions

NICE Actimize's Fraud Prevention, Anti Money-Laundering and Case Management Solutions to Support Enhanced Customer Protection and Regulatory Compliance

NEW YORK – January 05, 2011 – NICE Actimize, a NICE Systems (NASDAQ:NICE) company and the largest and broadest provider of a single risk and compliance software platform for the financial services industry, today announced that it has been selected by Green Dot Corporation, a leading prepaid financial services company, to provide a comprehensive suite of risk management solutions as the Company positions itself for continued growth and market leadership. NICE Actimize's Card Fraud, AML Suspicious Activity Monitoring, Know Your Customer/Customer Due Diligence and Enterprise Risk Case Manager solutions, will help Green Dot in its efforts to continue to detect and prevent fraud and money laundering activity, as well as manage related investigations and regulatory reporting requirements.

Green Dot is a leading provider of general purpose reloadable prepaid cards with more than 3.3 million active cards as of September 30, 2010. As the prepaid card market and the Company have grown, Green Dot realized a need to advance the sophistication of its systems and adopt an enterprise solution that would provide greater operational efficiencies and flexibility. NICE Actimize's risk and compliance solutions provide financial organizations like Green Dot, with the ability to leverage proven, packaged solutions and technology that can be adapted to meet the card industry's expanding needs.

"The prepaid card space is rapidly expanding, and we want to remain at the forefront of the industry by leveraging compliance and risk management technology that provides the breadth and flexibility required for growth as our organization and industry evolve," said John Morton, Chief Risk Officer for Green Dot. "NICE Actimize's enterprise approach to mitigating and managing fraud and money laundering risks affords us the opportunity to better service our customers, while also increasing the efficiency of our internal investigations workflow and reporting."

Green Dot will implement the Actimize Card Fraud solution to enable real-time fraud prevention, the Actimize AML Suspicious Activity Monitoring solution to address its anti-money laundering obligations with greater operational efficiency, the Actimize Know Your Customer/Customer Due Diligence (KYC/CDD) solution to support intelligent risk-based authorization and loading decisions for new and existing card customers. The Actimize Enterprise Risk Case Manager solution will provide an enterprise-level view of customer activity across the enterprise. Built on a single core risk platform, NICE Actimize's solutions connect seamlessly to provide comprehensive risk management and compliance support.

"Green Dot continues to demonstrate its leadership and foresight by proactively increasing the sophistication of its risk management controls and focusing on market growth and customer service," said Amir Orad, president

and CEO of NICE Actimize. “Customer safety and loyalty are critical in the card market. Green Dot is ensuring that all of the right mechanisms are in place to safeguard its greatest asset – its customers.”

NICE Actimize, a NICE Systems company, is the world’s largest and broadest financial crime, risk and compliance solutions provider. The company provides real-time and cross-channel fraud prevention, anti-money laundering, enterprise investigations, risk management and trading surveillance solutions built upon a single flexible software platform. Implemented by the majority of the world’s largest financial institutions, including all of the top 10 banks, the company’s solutions enable clients to mitigate financial crime risk, improve compliance, and reduce operational costs. www.actimize.com.

NICE Introduces New Real-time PCI Solution for Payment Card Industry Compliance

Solution driven by real-time desktop analytics provides off-the-shelf capabilities to automatically pause/resume multi-media customer interaction recordings for ensuring compliance with the latest data security standards

Ra'anana, Israel, January 12, 2011 - NICE Systems Ltd. (NASDAQ: NICE), the worldwide leader of intent-based solutions that extract insight to impact business performance, reduce financial risk and ensure safety and security, today announced new capabilities with NICE SmartCenter's Interaction Recording, that help contact centers ensure compliance with the recently updated requirement of the Payment Card Industry Data Security Standards (PCI-DSS) Council.

The PCI Data Security Standard (DSS) applies to all organizations that hold, process, or exchange credit and debit cardholder information. Non-compliant companies risk losing their ability to process credit card payments and being audited and/or fined. The updated requirement bans the audio recording and storage of sensitive cards validation codes and encourages contact centers to implement solutions that prevent the storage of this data.

The new solution from NICE helps organizations meet this mandate by leveraging the company's real-time [desktop analytics](#) for automatically pausing and resuming audio and screen recordings containing sensitive information. The result is a recorded interaction that doesn't contain the sensitive information as defined by the PCI DSS, such as the 3 or 4-digit card verification number. Furthermore, the solution enables the multiple stored recordings to be played back seamlessly and in accordance with the original call flow. It is available off-the-shelf with out-of-the-box capabilities that require no customization efforts, ensuring reliable and seamless compliance with complex regulatory requirements.

Aphrodite Brinsmead, analyst at Ovum said, "PCI requirements obligate organizations that handle credit card information to change the way they record and store data. In order to remove sensitive data from call recordings, enterprises need a system that automatically stops recording when card numbers are spoken over the telephone. Integration of desktop analytics and call recording, as offered by NICE, will help these organizations to meet regulations by expediting the process of removing cardholder information. They will be able to record and listen to interactions knowing that protected information has been removed."

Steve Palmer, Senior Manager of NICE Platform Planning, at Convergys Corporation, a global leading contact center and customer relations outsourcer, said, "For over five years NICE solutions have enabled us to elevate customer experience, cultivate customer loyalty, and achieve compliance. Last year we added data encryption capabilities from NICE. These capabilities are a market differentiator and go a long way to assuring the protection of sensitive customer information. And now, with the newly updated [PCI DSS](#), PCI compliance has become even more complex. NICE has been a great partner in working through these sorts of challenges."

"We are happy to extend the benefits of our real-time capabilities to the payment card industry," said Udi Ziv, President, NICE Enterprise Group. "NICE has over 20 years of experience with [compliance recording](#), and specific domain expertise with PCI DSS requirements through many deployments worldwide. We are already providing a set of solutions for facilitating PCI DSS compliance, including strong access control tools, multi-tiered security design, and end-to-end voice and screen media encryption. Now, with the addition of these latest capabilities we continue to be at the forefront of enabling compliance with the industry's latest requirements."

The PCI Security Standards Council is an open global forum for the ongoing development, enhancement, storage, dissemination and implementation of security standards for account data protection. The PCI Security Standards Council's mission is to enhance payment account data security by driving education and awareness of the PCI Security Standards. The organization was founded by American Express, Discover Financial Services, JCB International, MasterCard Worldwide, and Visa Inc.

The NICE Enterprise offering addresses the needs of customer-centric businesses with intent-based solutions that optimize Customer Dynamics. Driven by real-time, [cross-channel analytics](#), NICE provides solutions for increasing revenue, enhancing customer experience, improving regulatory compliance, and optimizing contact center and back office operations. NICE Enterprise solutions are implemented by contact centers of all sizes, branches, trading floors and back offices.

NICE Introduces Real-Time Speech Analytics for Understanding Intent in Real-time and Delivering an Impact on Customer Interactions As They Occur

NICE offering now fully integrated with real-time, cross-channel Interaction Analytics and real-time next-best-action guidance for an immediate impact on strategic business issues

Ra'anana, Israel, January 25, 2011 - NICE Systems Ltd. (NASDAQ: NICE), the worldwide leader of intent-based solutions that extract insight to impact business performance, reduce financial risk and ensure safety and security, today announced the introduction of [real-time speech analytics](#) to its Enterprise offering. The new capability enables organizations to understand customer intent during the interaction with contact center agents, automatically providing the necessary insights and next-best-action recommendations to agents, for an immediate impact that benefits both the customer and the business.

Michael Maoz, Research Vice President for Customer Strategies at leading analyst and advisory firm, Gartner, commented, "Contact centers are evolving into a strategic hub for businesses. After 20 years focused on efficiencies, customer service centers increasingly will bear the responsibility for customer loyalty and revenue generation. Real-time speech analytics is a technology that has been waiting for a market breakthrough. When fully integrated with customer-centric solutions, it will enable contact centers to realize their strategic business potential. Processes and measurement metrics will need to evolve for this to happen, but the value is clear: uncovering customer intent and gaining insights during the actual interaction enables organizations to deliver exactly what customers need in real time. This is the key to securing the customer relationship, improving satisfaction and loyalty, and ultimately driving revenue growth."

NICE business solutions, now integrated with real-time speech analytics, enable organizations to address strategic business issues such as [increasing revenues](#) from inbound calls, improving [customer loyalty](#) and enhancing [contact center efficiency](#). For example, real-time speech analytics can automatically identify a sales opportunity during the customer call by analyzing the content of the conversation and its context and then automatically deliver real-time guidance to the contact center agent on the best offer suited for the customer, and how to handle objections should they arise.

Udi Ziv, President of the NICE Enterprise Group, said, "Impacting customer interactions in real time is a cornerstone of our vision for changing the way customers and organizations interact. We are proud to take our real-time offerings to the next level by integrating innovative real-time speech analytics to our cross-channel business solutions. This capability, combined with [real-time next best-action guidance](#) and [cross-channel interaction analytics](#) enables our customers to leverage our business solutions for unprecedented results in tackling their most strategic business issues."
