Naftoport Protects Global Petroleum Supply Chain with NICE Security Solutions

NICE Situator and NiceVision help critical facility in Poland enhance situational awareness and improve incident management

RA'ANANA, ISRAEL, June 2, 2014 – NICE Systems (NASDAQ: NICE) today announced that the Naftoport Ltd, the major oil transshipment port in Poland, is successfully using NICE Situator and NiceVision intrusion detection video analytics to protect its critical resources. The project integrates nine existing gateway security systems to enhance situational awareness for improved incident management and operational efficiency.

NICE's advanced situation management solution, NICE Situator, offers a single, centralized interface and automated, adaptive workflows that are helping port authorities respond quicker and more efficiently to unfolding incidents. Working together with ISM EuroCenter S.A., NICE has fully integrated NiceVision intrusion detection analytics, surveillance cameras, radar, intruder and hold up alarms, passive infrared, ACS, GPS and automatic identification systems with NICE Situator. Even sonar is being fed into Situator to detect intrusions from underwater.

The NICE solutions are also being used by Naftoport to optimize its day-to-day security operations in order to minimize down times and ensure operations continuity. Roughly 40 procedures are being automated with Situator to proactively prevent any disruptions.

Naftoport plays a vital role in the supply of petroleum to refineries in Poland and Germany, as well as the transit of crude oil from Russia and Kazakhstan to the ports of Western Europe, the United States and the Far East.

Cezary Józwiak, Head of Security at Naftoport

"Integrating our disparate security systems within NICE Situator has made our security team more efficient, effective, and agile by automating response processes and administration. It gives them a single operating platform through which they can proactively monitor, manage, and maintain the safety and security of the port, reducing risks and improving incident management."

Chris Wooten, Executive Vice President, NICE Security Group

"This implementation reinforces NICE's expertise in protecting major seaports worldwide, which is a critical element in border security. Working with Naftoport we have maximized the potential of its existing infrastructure investments, as well as provided a platform for the addition of new and upgraded systems in the future."

NICE's security solutions help organizations capture, analyze and leverage big data to anticipate, manage and mitigate security and safety risks, improve operations, and make the world a safer place. The NICE security, intelligence and cyber offerings provide valuable insights that enable enterprises and governments to take the best action at the right time by correlating structured and unstructured data from multiple sensors and channels, detecting irregular patterns, and recognizing trends. NICE Security solutions are used by thousands of customers worldwide, including transportation systems, critical infrastructure, city centers, banks, enterprises and government agencies.

About Naftoport

Naftoport Ltd performs transshipments of crude oil and refined oil products in the Port of Gdańsk. The company is a critical part of the petroleum supply chain for Polish and German refineries and crude oil transit from Russia and Kazakhstan to the ports of Western Europe, the United States and the Far East. Naftoport has a capacity of 40 million tons annually across its four jetties

About ISM EuroCenter S.A.

ISM EuroCenter S.A. is a provider of intelligent security management and building automation solutions. It was established in 2008 and is part of the JW PROJAN GROUP. The company consists of specialists, who have been professionally involved in areas of ISM EuroCenter S.A. activities. www.ismeurocenter.com

About NICE Systems

NICE Systems (NASDAQ: NICE) is the worldwide leading provider of software solutions that enable organizations to take the next best action in order to improve customer experience and business results, ensure compliance, fight financial crime, and safeguard people and assets. NICE's solutions empower organizations to capture, analyze, and apply, in real time, insights from both structured and unstructured Big Data. This data comes from multiple sources, including phone calls, mobile apps, emails, chat, social media, video, and transactions. NICE solutions are used by over 25,000 organizations in more than 150 countries, including over 80 of the Fortune 100 companies. www.nice.com.

Forward-Looking Statements

This press release contains forward-looking statements as that term is defined in the Private Securities Litigation Reform Act of 1995. Such forward-looking statements, including the statements by Messer Wooten, are based on the current expectations of the management of NICE-Systems Ltd. (the Company) only, and are subject to a number of risks and uncertainties that could cause the actual results or performance of the Company to differ materially from those described herein, including but not limited to the impact of the global economic environment on the Company's customer base (particularly financial services firms) and the resulting uncertainties; changes in technology and market requirements; decline in demand for the Company's products; inability to timely develop and introduce new technologies, products and applications; difficulties or delays in absorbing and integrating acquired operations, products, technologies and personnel; loss of market share; pressure on pricing resulting from competition; and inability to maintain certain marketing and distribution arrangements. For a more detailed description of the risk factors and uncertainties affecting the company, refer to the Company's reports filed from time to time with the Securities and Exchange Commission, including the Company's Annual Report on Form 20-F. The forward-looking statements contained in this press release are made as of the date of this press release, and the Company undertakes no obligation to update or revise them, except as required by law.

NICE Solutions Help Secure the World's Largest Soccer Tournament, Taking Place in Brazil

NICE Situator was chosen as the centerpiece for one of the country's Integrated Management Centers, which serves the safety and security needs of millions of citizens and tourists

Paramus, New Jersey, June 4, 2014 – NICE Systems (NASDAQ: NICE) today announced that a large city in Brazil has implemented NICE Situator to help secure its community and next week's international soccer tournament, taking place in Brazil from June 12 to July 13, 2014. NICE Systems will continue working with local authorities following the tournament as part of a broader safe city initiative, to protect its millions of citizens.

NICE Situator was selected as the centerpiece of the integrated management center that will oversee safety and security in one of the soccer tournament's host cities. The center brings together 24 government agencies that will leverage NICE Situator to enhance situational awareness, decision-making and incident response. Should an incident occur, security operators will have instant access to real-time video from hundreds of video cameras along with an automated response plan.

"We're proud to have been selected for this safe city initiative, which involves securing one of the biggest sporting events in the world," said Chris Wooten, Executive Vice President, NICE Security Group. "NICE's experience and technology makes us uniquely equipped to support a multifaceted security initiative of this level. This comes on the heels of our successful safe city initiative with Sochi, Russia."

At the conclusion of the project, NICE Situator will be the centerpiece of a comprehensive city-wide solution that integrates multiple video surveillance systems, including NiceVision, and connects to thousands of cameras and sensors. The solution will correlate data from behavioral analytics software, social media analysis, access control, and fire and intrusion detection systems. Operators will use Situator to monitor and manage security at the soccer stadium, hotels, roads, transit system, airport, and other locations in the city. The solution will also integrate computer aided dispatching, helping to manage incidents that are escalated by emergency service center operators.

NICE's security solutions help organizations capture, analyze and leverage big data to anticipate, manage and mitigate security and safety risks, improve operations, and make the world a safer place. The NICE security, intelligence and cyber offerings provide valuable insights that enable enterprises and governments to take the best action at the right time by correlating structured and unstructured data from multiple sensors and channels, detecting irregular patterns, and recognizing trends. NICE Security solutions are used by thousands of customers worldwide, including transportation systems, critical infrastructure, city centers, banks, enterprises and government agencies.

The End of the Customer Service Run-around: Journey Optimization Reduces Headaches for Both Companies and Customers

The NICE Customer Journey Optimization solution helps companies understand how and why customers are interacting with them across different channels and touch points, reduce bottlenecks, and enhance each individual journey

RA'ANANA, ISRAEL, June 9, 2014 – NICE Systems (NASDAQ: NICE) today announced the beginning of the end for the customer service run-around. With today's announcement of the NICE Customer Journey Optimization solution, customers can now enjoy a personalized experience with much less effort, while organizations gain transparency to the customer experience across different channels and touch points – allowing them to reduce customer effort, increase customer loyalty, operate more efficiently, and maximize revenue opportunities.

Customers today use an average of six different channels to contact companies and service providers (source: NICE 2013 Customer Experience Survey). They switch quickly from web, to telephone, to social media, to chat, to interactive voice response, to visiting a retail location, depending on whichever is most convenient at the moment, all while expecting the company to remember what they said and did over several of their past interactions.

Yet companies as a whole, and divisions such as marketing, sales, and service, manage each of these channels as silos, optimizing the customer experience for each channel independently but losing track of the customer's overall journey as they jump from channel to channel.

"Organizations must be able to connect all the dots in order to see the 'big picture' of how customers interact with them across channels and touch points," said Yochai Rozenblat, President of the NICE Enterprise Group. "Customer Journey Optimization helps organizations know where customers have been, what they're trying to achieve, and why specific issues led them down a particular channel."

The cloud-based Customer Journey Optimization solution, based on the NICE Customer Engagement Analytics platform, uses predictive and real-time analytics as well as patented machine learning technologies to identify customer behavior patterns and help determine customers' next move, likeliness to churn, or interest in a particular product or offer. Organizations can use this information to personalize the customer experience in real time by deciding which offers or messages to present to a customer while an interaction is taking place.

Journey visualization allows organizations not only to focus on the individual journey but also to understand the impact of the thousands of journeys that take place each day. By analyzing and monitoring cross-channel paths, companies can use NICE Customer Journey Optimization to detect important insights about groups of people who exhibit a similar pattern of behavior. This could identify problems and opportunities that might once have gone undetected.

"Our solution is unique in enabling companies to identify journey bottlenecks and reduce customer effort for whole segments of customers, while at the same time enhancing and personalizing the experience for each individual customer," said Rozenblat. "Understanding the customer journey is instrumental to improving customer experience and driving brand loyalty."

NICE Introduces New Text-to-911 Logging Solution for Next Gen Emergency Communications Worldwide

At NENA 2014, NICE will showcase Text-to-911 among its leading public safety solutions, and will participate in the education program

Paramus, New Jersey, June 10, 2014 – NICE Systems (NASDAQ: NICE) today announced that it has introduced a Text-to-911 logging solution for the public safety market. This solution addresses the need to capture and reconstruct Text-to-911 communications for incident investigations and quality assurance purposes.

As of May 15, 2014, major US carriers are enabling Text-to-911 capabilities for any public safety answering point (PSAP) that chooses to opt in. The FCC is now working to ensure that by the end of 2014 this extends to all service providers.

NICE's Text-to-911 logging solution has been designed to reliably capture these communications. Emergency text messages can be viewed in an incident timeline along with other related multimedia such as voice recordings, video, GIS and call-taker screens.

The NICE Text-to-911 logging solution is compatible with the National Emergency Number Association's (NENA's) i3 and the European Emergency Number Association's (EENA's) NG112 standards and also supports interim (transitional) Text-to-911 solutions. It is designed to work with NICE Inform, a software application layer that synchronously combines data from various capture platforms, including SIP-based VoIP, video and text. For the many emergency communications centers that have already deployed NICE Inform, adding the NICE Text-to-911 logging solution is an easy, seamless upgrade.

"Text-to-911 is an important NG9-1-1 milestone and the first step toward richer PSAP communications with the public," said John Rennie, General Manager, Public Safety, NICE Systems. "Recent FCC proposals are accelerating the pace toward more widespread deployment of Text-to-911, and other forms of multimedia communications are not far behind. NICE is committed to providing innovative solutions to help 911 centers manage the coming wave of Text-to-911 and other Next Gen communications."

NICE will showcase Text-to-911 at the NENA 2014 Conference and Expo, which takes place June 14-19 at the Music City Center in Nashville, Tennessee. It will also demonstrate its full suite of NG9-1-1 solutions at booth #615 – this includes recent enhancements to its Quality Assurance module as well as other systems for recording, managing, reconstructing and analyzing audio, video, screens, and multimedia data.

NICE will also participate in the following panels:

- "The Synergy between 911 and FirstNet" – June 17, 9:45
Jenny Hansen, Partner Manager, NICE
- "What Analytics Can Do for Your PSAP" – June 18, 11:00
John Rennie, General Manager of Public Safety, NICE

NICE is a member of the NENA Next Generation Partner Program (NGPP) and an active participant in NENA's NG9-1-1 Industry Collaboration Events (ICE).

NICE Again Named Leading Contact Center Workforce Optimization Vendor by DMG Consulting

NICE leads the contact center WFO and performance management markets in 2013, according to DMG's reports

RA'ANANA, ISRAEL, June 10, 2014 – NICE Systems (NASDAQ: NICE) announced today that it has again been recognized as the worldwide leader in the contact center Workforce Optimization (WFO) market by DMG Consulting LLC. This is the fourth consecutive year that NICE has been positioned as the top WFO vendor, with an increase in market share. NICE has also been named the market share leader for contact center Performance Management (CCPM) with a 40.6 percent market share based on number of seats, according to the 2013 DMG Contact Center Performance Management Market Report.

In the contact center WFO segment, NICE holds a 40.8 percent market share for 2013, based on DMG's 2013 Workforce Optimization (Quality Management/Liability Recording) Market Share Report. According to this report, NICE also holds the leadership position in the fast-growing cloud-based WFO market with a 43.8 percent share of the market. The report analyzes approximately 45 WFO vendors worldwide whose offerings include four or more of the ten modules found in WFO suites, including: quality assurance, workforce management, performance management, voice of the customer/surveying, speech analytics, text analytics, desktop analytics, coaching, eLearning, and call recording.

"2013 was a good year for the WFO market, but one that indicates that this is a maturing market," said Donna Fluss, President of DMG Consulting. "DMG expects the WFO market to reinvent itself and to come on strong, even if it takes several years for this transition to occur. The WFO market often outperforms other contact center IT sectors, as well as many general IT segments, because it keeps delivering innovation."

In DMG's CCPM report Fluss states, "CCPM's time may finally have come. 'Big data,' employee engagement, and the increasing importance of capturing and analyzing the customer journey are major trends that are driving end users to give CCPM a fresh look."

"Our leadership in the WFO and CCPM markets reinforces the success of our solutions in helping organizations align their workforce around a common set of goals in order to deliver an exceptional customer experience and increase the bottom line," said Yochai Rozenblat, President of the NICE Enterprise Group. "NICE Workforce Optimization engages employees through coaching and competition to drive higher levels of performance across the organization. We are continuously innovating to provide companies with tools for employee engagement, like the gamification capabilities that we offer in our latest release of NICE Performance Management."

NICE's WFO contact center suite contains all 10 modules to help their customers evaluate and improve all aspects of the customer experience: recording, coaching, e-learning, performance management, surveying, speech analytics, workforce management, desktop analytics, text analytics and a WFO back-office suite.

NICE Safe City Solutions Deployed in Glasgow to Bolster Security, Safety, and Operations Management

Scotland's largest city is using NICE's advanced PSIM and video management solutions for daily operations and major events

RA'ANANA, ISRAEL, June 11, 2014 – NICE Systems (NASDAQ: NICE) today announced that the city of Glasgow is deploying its security solutions to enhance the community's safety and security infrastructure. The implementation, which includes NICE Situator and NiceVision for video management, will help the city strengthen its daily operations and streamline incident response.

Glasgow was recently awarded funding from the Technology Strategy Board (TSB) Future Cities Demonstrator competition to show what can be achieved by innovative use of today's technology.

The city is using NICE Situator, an advanced Physical Security Information Management (PSIM) system, to consolidate data from various city-wide services like Public Space CCTV and traffic control within a single operations center. This information is filtered into pre-defined response plans to help operators better manage situations in real time. It also provides improved visibility and control of different sensors and better collaboration across relevant security and safety departments.

This initiative fuses Community Safety Glasgow's (CSG) CCTV operation with Traffcom, the Glasgow City Council team which monitors the city's road networks, traffic lights, and traffic cameras. By pooling these resources, CSG and Traffcom now have joint access to the city's entire network of live and recorded CCTV footage.

As part of the £24m Future Cities Glasgow program, the city will also install an advanced digital camera network to be integrated with Situator. Any unusual activity that is detected over the cameras will trigger an alarm in the command center, prompting further investigation by emergency services.

Phil Walker, Managing Director of Community Safety Glasgow

"The NICE solutions will enable us to address safety and security requirements, and beyond that the solutions can be further scaled in the coming months and years to help us improve city services and crime prevention. We have also been impressed with NICE's ability to help us deploy the solution in a short amount of time."

Chris Wooten, Executive Vice President, NICE Security Group

"This deployment reinforces our expertise in helping cities around the world manage day-to-day life, as well as large-scale events, from both a security and operational perspective. We are very pleased to be a key player in safeguarding the city's facilities as well as the huge influx of visitors that are expected this summer, and look forward to a continued partnership with the city of Glasgow. Glasgow is the first city in the UK to earn a 'Safe City' status, fully utilizing the capabilities that NICE Situator can provide."

NICE's security solutions help organizations capture, analyze and leverage big data to anticipate, manage and mitigate security and safety risks, improve operations, and make the world a safer place. The NICE security, intelligence and cyber offerings provide valuable insights that enable enterprises and governments to take the best action at the right time by correlating structured and unstructured data from multiple sensors and channels, detecting irregular patterns, and recognizing trends. NICE Security solutions are used by thousands of customers worldwide, including transportation systems, critical infrastructure, city centers, banks, enterprises and government agencies.

About NICE Systems

NICE Systems (NASDAQ: NICE) is the worldwide leading provider of software solutions that enable organizations to take the next best action in order to improve customer experience and business results, ensure compliance, fight financial crime, and safeguard people and assets. NICE's solutions empower organizations to capture, analyze, and apply, in real time, insights from both structured and unstructured Big Data. This data comes from multiple sources, including phone calls, mobile apps, emails, chat, social media, video, and transactions. NICE solutions are used by over 25,000 organizations in more than 150 countries, including over 80 of the Fortune 100 companies. www.nice.com.

NICE Actimize Recognized in Analyst Firm's 2014 Enterprise Fraud Management Market Impact Report

Report notes that an effective enterprise fraud operation revolves around a robust case management capability

New York – June 11, 2014 – NICE Actimize, a NICE Systems (NASDAQ:NICE) company and the largest and broadest provider of a single financial crime, risk and compliance software platform for the financial services industry, has been recognized in the 2014 Aite Group Market Impact report, "Enterprise Fraud Management: Still Evolving After All These Years." The Aite report profiled only those enterprise fraud management (EFM) providers whose solutions included a robust alert and case management system, along with key fraud prevention modules. Aite Group is an independent research and advisory firm focused on business, technology and regulatory issues and their impact on the financial services industry.

NICE Actimize, with more than a decade of experience in providing enterprise fraud solutions to leading global financial institutions, was one of only eight established enterprise fraud management providers included in the report. Several emerging players were also covered in the analysis.

In addition to an analysis of the EFM landscape, the report provided a vendor comparison of the breadth and depth of the solutions offered by the EFM providers across eleven fraud prevention point solutions, including most types of check fraud, debit and credit card fraud, online fraud, contact center fraud, ACH and wire fraud, ATM fraud, employee fraud and new account fraud. NICE Actimize demonstrated capabilities in nearly all of the solutions listed.

"In our study of the market, we found that a number of enterprise fraud management providers offered a full view of customers and their activity through robust case management tools that can integrate the outputs of all fraud-prevention systems including their own," said Shirley Inscoc, research analyst, Aite Group LLC and author of the report. "This ability is necessary to detect fraud effectively and reduce false positives to a manageable level. NICE Actimize provides these capabilities."

“We agree with Aite’s conclusion that financial institutions should consider a centralized approach to enterprise fraud management,” said Joe Friscia, president of NICE Actimize. “In addition to the benefits of greater operational efficiency, this approach helps the enterprise risk management team identify emerging new threats and manage new products or technologies that are implemented. An integral part of this approach to combatting fraud attacks is a centralized risk case management and alerts system. As fraudsters strengthen their resources, NICE Actimize is continually investing in research and development to find new ways to stay ahead of this evolving threat landscape.”

The Actimize Integrated Fraud Management suite enables institutions to protect commercial and retail customers from fraud across multiple payment channels, including mobile, contact center and online, enabling effective cross-channel, real-time fraud detection and prevention capabilities. In addition, it can ingest information from third party or in-house fraud systems providing a centralized view of the organizations’ fraud ecosystem to reduce fraud losses, improve efficiency and enhance exceptional customer service.

In the report’s review of emerging players in the field of enterprise fraud management, a strong case management capability was one of the key recommendations most mentioned as an area for new companies to develop.

The Aite Group Enterprise Fraud Management Report is based on interviews and demos with EFM providers, financial institution executives, and Aite Group’s in-house knowledge.

About Aite Group

Aite Group is an independent research and advisory firm focused on business, technology, and regulatory issues and their impact on the financial services industry. With expertise in banking, payments, wealth management, capital markets, and insurance, Aite Group’s analysts deliver comprehensive, actionable advice to key market participants in financial services. Headquartered in Boston with a presence in Chicago, New York, San Francisco, London, and Milan, Aite Group works with its clients as a partner, advisor, and catalyst, challenging their basic assumptions and ensuring they remain at the forefront of industry trends.

NICE to Discuss Securing Major Sporting Events and Combatting Crime with Social Media at IFSEC International 2014

NICE will also showcase its leading solutions for situation, incident, and intelligent video surveillance management

London, June 12, 2014 – NICE Systems (NASDAQ: NICE) announced today that it will lead several educational sessions on the topics of safe cities, social media, and Physical Security Information Management (PSIM) at IFSEC International 2014, to be held June 17-19 at ExCel in London. It will also showcase its industry-leading solutions for situation, incident and video surveillance management at stand F950.

The IFSEC Academy – the conference’s ground breaking education program – focuses on the key issues faced by the security industry. NICE has been invited to present its expertise on:

- **What a ‘Safe City’ brings to supporting a major sporting event – the positive impact for security, safety and operations – June 18, 14:30**
NICE will discuss the challenges and needs associated with providing an all-encompassing safe city solution and the benefits it brings to major sporting events.
- **Social Media – A Crime Fighting Tool? – June 18, 15:30**
Citizens are using the Internet to share information, mobilize the community and organize protests and riots. NICE will demonstrate how cities can also use data from online networks when investigating criminal activities.
- **PSIM and Building Management Systems: the benefits of co-location – June 17, 12:30**
NICE will address how PSIM solutions can not only support the security and operational needs of an organization but also integrate building management systems – for example, controlling heating/cooling in relation to room use for improved energy efficiency. This provides organizations a holistic enterprise situation management solution.

Throughout the event, NICE will demonstrate the following solutions:

NICE Situator – New mobile and web capabilities extend NICE situation management from the control room to the field, while providing advanced tools for handling complex, multi stakeholder incidents in information rich environments. The latest release also improves visualization of incidents by integrating with advanced organizational and global mapping resources.

NiceVision Net – The latest release of NICE’s intelligent video surveillance solution features new device capabilities to promote recording resiliency, enhanced web client functionality, and a new encoder.

Situator Express – Transforms video surveillance into a complete security management solution, enabling organizations to focus on their core security challenges.

NICE Inform – Integrates multimedia from various security systems to provide a 360-degree view of incidents for investigations, debriefing and training. The latest release synchronizes recorded operator screens with audio, video, GIS and other multimedia, providing insight from every angle.

NICE’s security solutions help organizations capture, analyze and leverage big data to anticipate, manage and mitigate security and safety risks, improve operations, and make the world a safer place. The NICE security, intelligence and cyber offerings provide valuable insights that enable enterprises and governments to take the best action at the right time by correlating structured and unstructured data from multiple sensors and channels, detecting irregular patterns, and recognizing trends. NICE Security solutions are used by thousands of customers worldwide, including transportation systems, critical infrastructure, city centers, banks, enterprises and government agencies.

NICE Actimize Anti-Money Laundering Poll Finds Only 48 Percent of Financial Institution Respondents Believe They Have a Strong Culture of Compliance

Identifying gaps in the institution's overall AML strategy was highlighted as the number one AML concern of 47 percent of respondents

NEW YORK – June 17, 2014 – NICE Actimize, a NICE Systems (NASDAQ:NICE) business and the largest and broadest provider of a single financial crime, risk and compliance software platform for the financial services industry, has found that only 48 percent of poll participants believe that the financial institutions they work for have a strong culture of compliance, with 29 percent expecting change in their firm's approach to AML compliance this year.

The findings are a strong parallel for a market environment seeing increasing regulatory enforcement activity, more sanctions, and larger penalties and fines targeting individual accountability than ever before. Despite these issues, according to the Anti-Money Laundering "Culture of Compliance" Poll conducted by the company, only 22 percent say their compliance culture could use improvement – an indication that much work remains to be done at financial institutions in establishing compliance-related priorities.

NICE Actimize, with more than a decade of experience in providing global compliance and regulatory software solutions to leading financial institutions, conducted its Anti-Money Laundering "Culture of Compliance" Poll among 422 compliance professionals representing more than 300 financial services firms participating in a recent webinar. Nearly half the poll's respondents came from large global institutions from among 17 countries, with the United States, the United Kingdom and Canada representing the largest share of the group's respondents.

Aligned to the issues faced in building a strong compliance culture, approximately 47 percent of the responding financial institutions rated identifying gaps in their overall anti-moneylaundering strategy as their most pressing AML concern for the next 6 to 12 months. Additionally, about 23 percent of the respondents cited model risk governance and model risk management requirements as another area for continued attention, followed by the desire of about 18 percent to avoid regulator-imposed sanctions. About 12 percent of the survey's respondents cited that being held personally responsible for non-compliant activities was something they'd be thinking about over the coming year.

Additional analysis of the poll results indicated that a strong 75 percent expect that significant, or at least some, operational changes have or will be implemented to improve the quality of data and information gathering at their organizations – an important indicator for the balance of the year. Understandably, these changes reflect financial institutions' positioning that they must act to respond to regulators in a timely manner to ensure minimal risk of sanctions and remediation.

"Increasingly, regulators are looking for accountability at both institutional and compliance officer levels," said Joe Friscia, President of NICE Actimize. "The current enforcement environment is demanding more of AML risk management efforts pushing compliance higher on the business agenda. Integrating processes such as customer risk assessment and sanctions screening efforts with transaction monitoring delivers a broader view of AML risk to a firm and enables greater ability to action against it. We believe that an enterprise-wide approach to integrating AML functions is key to establishing a thriving culture of compliance."

Qualified media outlets may obtain the full research results by contacting cindy.morgan-olson@niceactimize.com or by clicking on www.niceactimize.com/cultureofcompliance.
