Getting the Most Out of Your Voice of the Customer Program

Every dollar of capital invested in your Voice of the Customer (VOC) program should be generating a financial benefit to your organization. As VOC practices mature and become ingrained across the enterprise, you should expect an increasing return on investment (ROI).

A cornerstone of realizing the financial benefits of your VOC program is customer value, which can be maximized by targeting three fundamental drivers:

Sales Per Customer

Act on customer feedback directly and indirectly to encourage additional purchases.

Customer Tenure

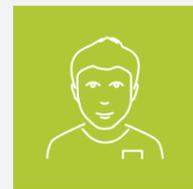

Detect and mitigate churn risks and improve the customer experience to enhance loyalty.

Cost to Serve

Identify and address operational inefficiencies to yield savings.

NICE VOC's holistic approach to customer experience enables you to close loops for each of these drivers at three interrelated levels:

Customers

Use survey responses to close the loop with individual customers on a transaction-by-transaction basis.

Employees

Customer feedback and insights guide the staff, improving customer experience at the operational level.

Processes

Analytics on aggregated VOC data guides broader strategic planning to improve the customer experience enterprise-wide.

With NICE VOC, you also have the tools needed to create opportunities to drive customer value at each organizational level.
