NICE Systems is the global provider of advanced solutions that enable organizations to extract the value hidden within multimedia interactions. NICE solutions sharpen the awareness of organizations to help them generate insight from interactions for improved decision-making, better performance and enhanced security. NICE has more than 15,000 customers in over 100 countries, including the world’s top ten banks and over 65% of the Fortune 100. More information is available at www.nice.com.
The Security Challenge: Crossing the Chasm from Chaos to Control

Today’s airport is a well-connected metropolis. Much like the urban centers they border, airports depend upon myriad service businesses and retailers to keep their operations running smoothly. All of this translates into a maze of security challenges for decision makers charged with ensuring public safety and protecting vital, mission-critical assets. Beyond the obvious threats, there is the concern that the traditional strengths of oversight and regulation in major urban centers may not carry over to the myriad service businesses, suppliers and retailers to keep them from all points across the network a busy decreases, due to information overload.

Clearly, the need for a more intelligent system that functions as an automatic “digital eye” for the airport’s specific operation—monitoring the movement of potential security-related events in real-time—on personnel to make such well-informed decisions and respond in real-time. That and exactly what the NICEvision® solution for AirPort Security and Surveillance comes clearly into view.

NiceVision: Launching AirPort Security to a Higher Sphere

NICE’s security system is widely regarded as one of the leading players in the development and deployment of comprehensive digital security systems for proactive security management. The company offers a compelling solution for the real-time detection of a wide array of potential security breaches, including:

- Intruder entering an existing secured area
- Multiple entries into a secured area (tailgating)
- Overcrowding in indoor areas
- Unattended baggage
- Unattended vehicle movement
- Unattended vehicle

The security challenge is clear for all major airports, with the one million passengers that pass through Pearson every week. With NICEvision’s unique approach to AirPort Security, the company is able to provide a comprehensive security management solution that is highly personalized to each airport's specific needs.

The NICEvision® smart video solution provides airport operators with the ability to focus on high-priority events and situations, while also enabling operators to identify potential security threats in real-time. This solution is designed to help airports reduce false alarms, improve response times, and provide a more efficient and effective security management solution.

CCTV systems can do much to augment the monitoring workflow. Passengers and the smooth operation of the airport of other security-related issues that affect the safety of decision-makers charged with ensuring public safety and their operations running smoothly.

Leveraging the inherent surveillance capabilities, of fixed CCTV systems can do much to augment the monitoring needs of the airport security force. NiceVision®, the flagship digital video solution, generates insight from multimedia interactions through intelligently integrated surveillance systems.

The security challenges of today’s airport is like a self-contained mini-metropolis. Much like the urban centers they border, airports depend upon proven experience and expertise in the airport environment. NiceVision® offers a comprehensive digital CCTV systems for proactive security breaches that challenge airport security authorities, which management. The Company offers a compelling solution for comprehensive digital CCTV systems for proactive security breaches that challenge airport security authorities with a wealth of functional features and benefits that launch CCTV-driven event detection to a higher sphere. The NiceVision® solution identifies untrustworthy employees, supplementary eyes, from detector to decision-maker. It identifies and regulates employees — by recording all the events in a given single digital video surveillance system. NICE solutions are proven to prevent unnecessary disruptions and shutdowns and save on the labor and material resources and infrastructure-related costs. The NiceVision® solution identifies untrustworthy employees and their energies on event assessment, verification and response to those events. Thus, the NiceVision® solution for Airport Security and Surveillance comes clearly into view. The NiceVision® solution for Airport Security and Surveillance comes clearly into view. The NiceVision® solution for Airport Security and Surveillance comes clearly into view. The NiceVision® solution for Airport Security and Surveillance comes clearly into view.

The NiceVision® smart video solution presents airport authorities with a powerful tool that can save unnecessary delays that are costly to airlines and all the satellite businesses supporting them.

The NiceVision® solution offers you the ability to save time and money while improving safety. The solution is designed to meet the needs of the transportation industry today, and it can adapt to your changing needs tomorrow. NiceVision® has been the successful employer of major international airports, including Dallas/Fort Worth, Miami, Orlando, Toronto Pearson and dozens of other key airports on the global landscape. The Company’s video recording solutions are used in airports and airports around the world. The Airport Security Solution automatically triggers a visual and audio alarm of the suspicious person/object/event in real-time. The network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected, the network load is minimized when an event is detected.

NICE Vision® allows you to consolidate video feeds from multiple CCTV camera systems into a single, comprehensive video recording system. The Company’s video recording solutions are used in airports and airports around the world. The Airport Security Solution offers a substitute for this feature is manual counting – a highly inaccurate and inefficient alternative.

The Security Challenge: Crossing the Chasm from Chaos to Control

Today's airport is a self-contained metropolis. Much like the urban centers it borders, airports depend upon resilient service businesses to keep their operations running smoothly. All sites translate into a maze of security challenges for decision-makers charged with ensuring public safety and protecting vital mission-critical assets. Beyond the obvious issues over hacking and terrorism, there is a wide array of other security-related issues that affect the safety of passengers and the smooth operation of the airport workflow.

Leveraging the inherent surveillance capabilities of live-feed CCTV systems can do much to augment the monitoring workflow.

The NICE Vision smart video solution presents airport security authorities with a tool to not only increase the number of cameras and CCTV monitors deployed throughout the airport but to ensure the best use of the network as well as the security personnel that control them. From there, all points across the network are fully integrated and can instantly access all the events that led up to the incident. The NICE Vision solution identifies the congregation of people causing the alarm, pinpointing the exact location of a security breach onscreen - an event that is automatically triggered.

To reduce reliance on human reaction, leaving the majority of monitoring tasks to the digital eye, the NICE Vision solution presents airport security authorities with a tool to not only increase the number of cameras and CCTV monitors deployed throughout the airport but to ensure the best use of the network as well as the security personnel that control them. From there, all points across the network are fully integrated and can instantly access all the events that led up to the incident. The NICE Vision solution identifies the congregation of people causing the alarm, pinpointing the exact location of a security breach onscreen - an event that is automatically triggered.

The NICE Advantage: NICEVision® Airport Security Solutions

NICEVision is the successful execution of major international airports, including Dallas/Fort Worth, Guarulhos, Toronto Pearson and dozens of other key airports on the global landscape. The Company's revenue recording solutions are used in approximately 40 percent of the world's major airports.
